COMPANY OVERVIEW

We are a technology company developing integrated, complex, and secure solutions, while focusing on improving the business processes that stand behind the software. We build, implement, and develop big-data solutions for key-market verticals

ABOUT US

- Founded in 2001
- Part of tarent group
- 3.1 mil Eur revenue in 2018
- 100 + employees
- 100+ technologies used in production

using microservices architectures for apps that are both stable and scalable. We use state-of-the-art development methodologies that guarantee high-quality, reliable code, with a proven success track record of over 18 years.

THEY TRUSTED US OVER THE YEARS

COPIO

copio is the tool for competitive analysis and monitoring of prices. An automated competitive intelligence system, the solution is built with high-performance matching algorithms. The algorithms and the accuracy of data allow you to draw informed conclusions for price optimization.

BENEFITS

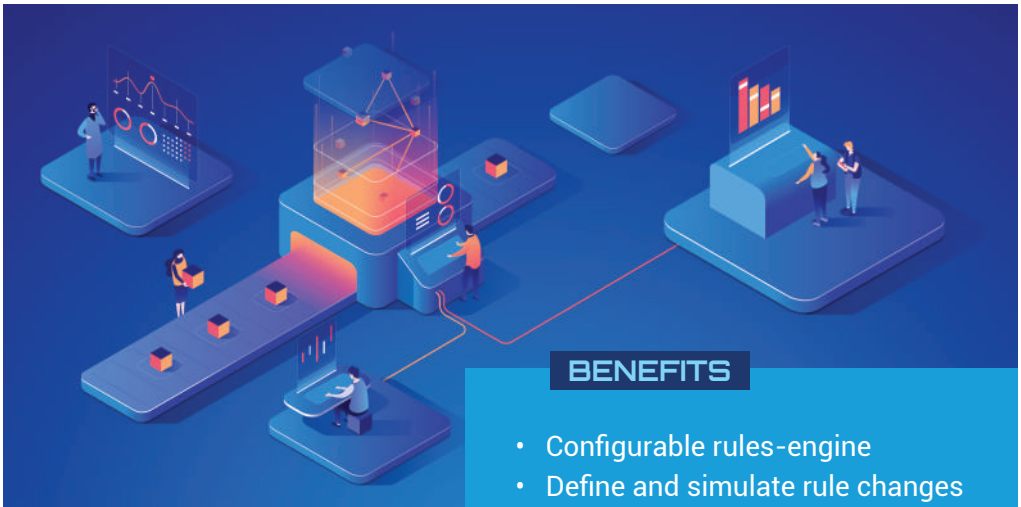

- Provision of competitor prices
- Provision of additional product information
- High-performance matching algorithm
- Validation of matching via mouse click
- Direct link to all competitor products
- Easy access and collaboration via web browser
- Intuitive and easy-to-use interface
- Rights and role management

INTEGRATIONS

Direct integration with our price management software, rupio.

RUPIO

rupio provides retailers with dynamic, automatic, and market-driven pricing for their products and services. At the same time, the user stays in complete control of the whole pricing process. Based on numerous parameters, such as internal KPIs or competitors' prices, retailers can implement their pricing strategies consistently.

INTEGRATIONS

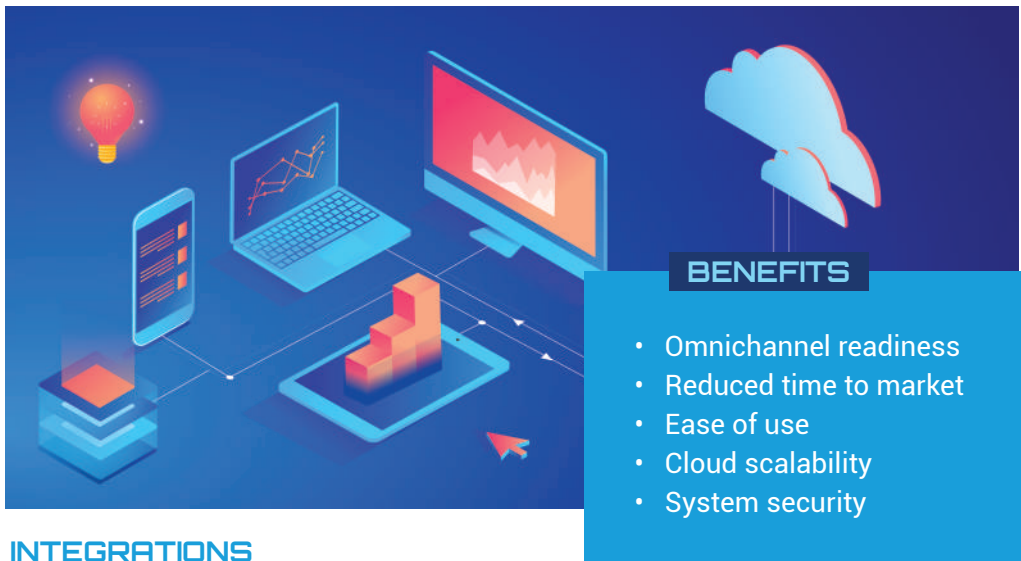

Direct integration with our competitor price monitoring software, copio.

BENEFITS

- Configurable rules-engine
- Define and simulate rule changes
- Administration of pricing rules
- Supervisor function
- Log and audit functions
- Multilingual

HEADLESS CMS

Headless CMS is a stand-alone back-end solution to enable breakthrough, content-driven experiences on any channel. A headless CMS provides all of the capabilities of the backend of a traditional CMS, while giving responsibility of the content presentation/layout to the delivery channels. The system is built as a content repository, making it accessible for display on any device.

INTEGRATIONS

Extensive, stable and comprehensive APIs ensure easy integration with software applications or legacy IT solutions. Business level enablement: interoperability from a business-user perspective with minimal to no IT involvement.

ROOMIO

roomio is a web application that displays meeting information using digital signage solutions and guest management systems.

BENEFITS

- Display of assignment plans directly to the meeting room door
- Option to display a program overview of multiple rooms
- Immediate display of changes in the schedule

INTEGRATIONS

Integrates seamlessly with digital signage solutions from Samsung and/or other top producers. Synchronized data from online calendars such as Microsoft Exchange, Google Calendar or other specialized systems, fully automated.

EXPERTISE & TECHNOLOGIES

During the years we focused on finding the best solutions for our clients and on code quality. Our team's solid expertise led to developing complex applications for customers in various industries, using the most advanced technologies.

BIG DATA

- Apache Hadoop
- Apache Kafka
- Apache Spark
- NoSQL Databases:
 - *AmazonDynamo DB*
 - *Cassandra*
 - *MongoDB*

DEVELOPMENT

FRAMEWORKS, TECHNOLOGIES
AND CONCEPTS

- Ajax
- Angular
- Bootstrap
- C, C++
- Go
- HTML
- Java
- Java EE
- Javascript
- JSON
- Microservices
- REST
- React
- Solr/Elastic
- Spark
- Spring Batch
- Spring Boot
- Spring Core/DI
- Spring Security
- ... and 60 more

CLOUD EXPERTISE

Private Cloud

- Container-Based Virtualization
- Kubernetes
- OpenStack
- Rancher
- Xen Cloud Platform

Public Cloud

- Amazon Web Services
- Google Cloud Platform

Control Tools

- Ansible
- Chef
- Puppet

DATABASES

- Cassandra
- ETL
- Flyway
- HSQLDB
- Liquibase
- MongoDB
- MySQL
- Oracle PL/SQL
- PostgreSQL
- Redis
- SQLite

OPERATIONS

- AGILE
- DEVOPS
- ITL
